Summary

Java Backend Developer with **4+ years of experience** designing and delivering **REST-based Web Services and multi-tier backend solutions** using **Java, Spring Framework (Spring Boot, Spring MVC, Spring Security), and Maven**. Experienced in full SDLC ownership – requirements, design, development, code review, and release – within Agile/Scrum teams. Strong background in **unit and integration testing (JUnit, Mockito)**, secure coding practices, CI/CD automation, and production support for high-volume, security-critical applications at **Infosys (client: Vanguard)**. Comfortable mentoring peers, running knowledge-transfer sessions, and collaborating across distributed, matrixed teams.

Technical Skills

Languages	Java 8/11, SQL
Frameworks	Spring Framework, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate
Web Services	REST APIs, J2EE-style Web Applications, JSON
Build & VCS	Maven, Git, GitHub
Messaging	Apache Kafka
MS Design Patterns	API Gateway, Circuit Breaker, CQRS, SAGA
Security	OAuth 2.0, JWT, Secure Coding, Vulnerability Remediation (Wiz, SonarQube)
Databases	PostgreSQL, MongoDB, Redis (Caching); working knowledge of SQL scripting
Design Patterns	SOLID Principles, LLD, Singleton, Factory, Builder, Strategy, Observer
Database Concepts	ACID Properties, Transactions, Indexing, Query Optimization
Data Structures	Arrays, Linked List, Stack, Queue, HashMap, Sorting & Searching
Testing	JUnit, Mockito, Postman, Unit/Integration/Performance Testing
CI/CD & DevOps	Docker, GitHub Actions, Bamboo
Business Rules	Drools Rules Engine
Tools & Practices	GitHub Copilot, JIRA, Agile/Scrum, Code Review, Requirements & Design Documentation

Experience

Java Backend Developer (Client: Vanguard)

Jul 2025 – Present

Infosys · Full-time

- Delivered fixes and enhancements for **Java Spring Boot REST services** at **Vanguard**, a large US financial company, acting as a subject-matter contributor on security-related production issues.
- Upgraded Spring Boot, Java, and library versions using **Maven** to remediate vulnerabilities identified in Wiz scan reports, following secure coding standards.
- Built and maintained **GitHub Actions CI/CD pipelines** to automate build, test, and deployment; validated changes via Wiz and SonarQube quality/security gates.
- Worked with **Docker-based deployments** and supported production release and rollback activities.
- Wrote and maintained **JUnit and Mockito** unit tests and maintained code coverage per compliance standards.
- Partnered with security and QA teams to review, test, and validate fixes without breaking existing functionality.
- Took part in requirements review, design review, code review, and daily Agile ceremonies (sprint planning, stand-ups, retrospectives).

Tech: Java 8/11, Spring Boot, Spring Framework, Maven, REST APIs, Docker, GitHub Actions, Wiz, SonarQube, Git, JUnit, Mockito, Agile

Java Backend Developer

Jun 2022 – Jul 2025

Atos · Full-time

- Designed and developed **REST APIs and microservices** in **Java and Spring Boot** for a Vulnerability Management System, contributing to solution design and technical documentation.
- Used **Apache Kafka** for reliable, message-oriented data exchange between services.
- Implemented the **Drools Rules Engine** to automate security risk scoring, reducing manual effort.
- Integrated external scanning tools via REST APIs to automatically surface security issues and generate reports.
- Used **Redis** for caching to reduce latency and improve response times.
- Wrote unit and integration tests with **JUnit and Mockito** and used **Postman** for API verification.
- Tuned queries and indexing in **PostgreSQL and MongoDB** to improve report load performance.
- Worked in Agile sprints using **JIRA and Git**, participating in code reviews and sprint ceremonies; helped onboard and guide junior team members.

Tech: Java, Spring Boot, Spring Framework, Maven, REST APIs, Kafka, Drools, PostgreSQL, MongoDB, Redis, JUnit, Mockito, Git, Microservices

Key Projects

Vulnerability Management System

Jun 2022 – Jul 2025

Atos

A backend platform built to help companies find, prioritize, and remediate security issues across their IT estate.

- Integrated external scanning tools via REST APIs to automatically detect security issues and generate reports.
- Used Drools Rules Engine to automatically assign risk scores to detected issues.
- Built independent microservices for asset tracking, issue prioritization, and risk management.
- Used Kafka for reliable inter-service communication.
- Delivered dashboards summarizing security trends and compliance status for stakeholders.

Tech: Java, Spring Boot, Spring Framework, Maven, REST APIs, Kafka, Drools, PostgreSQL, MongoDB, Redis, Microservices

Vanguard Vulnerability Remediation

Jul 2025 – Present

Infosys

A project at Infosys focused on identifying and fixing security issues in Java Spring Boot REST services used by Vanguard, a large US investment company.

- Diagnosed and remediated security issues across multiple Java microservices in production.
- Upgraded Spring Boot and library versions with Maven to eliminate known CVEs.
- Set up automated security checks (Wiz) within GitHub Actions CI/CD pipelines.
- Used Docker for deployment while ensuring fixes preserved existing functionality.
- Maintained test coverage and secure coding compliance throughout the project.

Tech: Java 8/11, Spring Boot, Spring Framework, Maven, REST APIs, Docker, GitHub Actions, Wiz, SonarQube, JWT, Git

Education

Master of Computer Applications (MCA)

Jul 2019 – Jul 2021

RKDF College, Bhopal
